

Messages Directory - React Native App

Student: Yue Ren

Course: CS5450 Mobile Programming

Exercise: Exercise 3 - Your React Native Messages Directory

Project Description

This project is a React Native messages directory app. The home screen displays important directories such as You, Home, Love, Family, Friends, and School. When the user taps a directory, the stored messages for that directory are shown below the grid.

Features

- Built with React Native and TypeScript.
- Responsive two-column directory grid.
- Colorful directory cards with labels.
- Stored messages are displayed when a directory is selected.
- Local data array, so no database is required.
- Includes images, screenshots, and README documentation.

How to Configure and Run

1. Install Node.js.
2. Install Android Studio and create an Android emulator.
3. Open Terminal in this project folder.
4. Run: `npm install`
5. Run: `npm run android`

Alternative preview command:

`npm start`

Then press a to open the Android emulator.

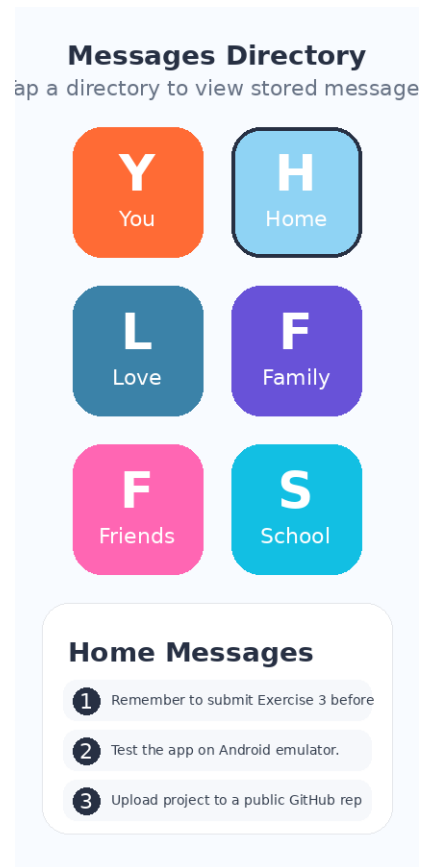

Exact Project Structure

```
MessagesDirectoryRN/

|   |   |-- icon_love.png
|   |   |-- icon_family.png
|   |   |-- icon_friends.png
|   |   |-- icon_school.png
|   |-- screenshots/
|   |   |-- screen_home.png
|   |   |-- screen_school.png
|   |   |-- screen_family.png
```

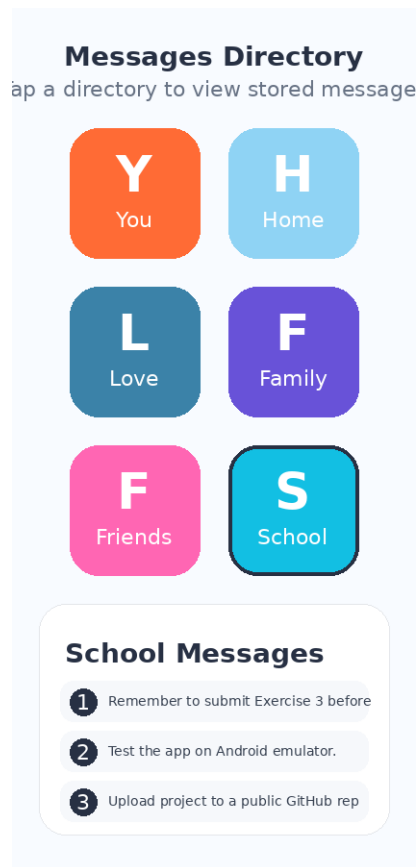

Screenshots

The following screenshots show the directory grid and the message panel after different directories are selected.

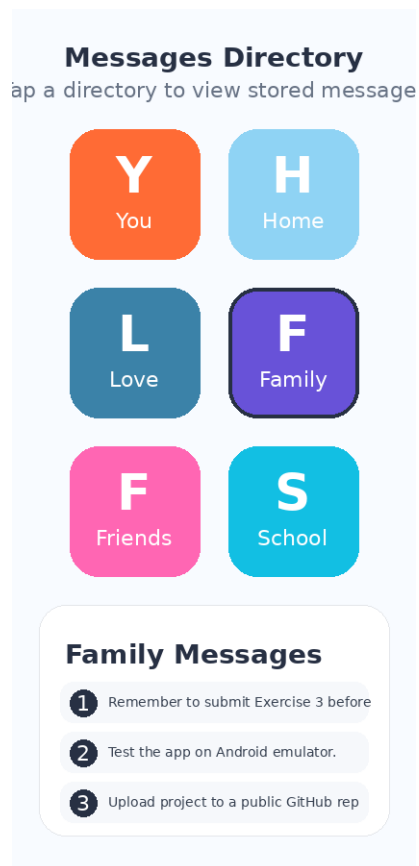

Home directory selected

School directory selected

Family directory selected

Submission Notes

Upload the full project to a public GitHub repository. For D2L, compress the full project folder as a ZIP file. The ZIP should include the JS/TS source code, images, screenshots, and README.pdf.
