

# CS2430 MOBILE COMPUTING

## Exercise 3: Your React Native Messages Directory

### Yue Ren 1269195

### Project Description

This project is a React Native messages directory app. The home screen displays important directories such as You, Home, Love, Family, Friends, and School. When the user taps a directory, the stored messages for that directory are shown below the grid.

### Features

- Built with React Native and TypeScript.
- Responsive two-column directory grid.
- Colorful directory cards with labels.
- Stored messages are displayed when a directory is selected.
- Local data array, so no database is required.
- Includes images, screenshots, and README documentation.

### How to Configure and Run

1. Install Node.js
2. Install Android Studio and create an Android emulator.
3. Open Terminal in this project folder.
4. Run: `npm install`
5. Run: `npm run android`

Alternative preview command:

`npm start`

Then press a to open the Android emulator.

### Exact Project Structure

MessagesDirectoryRN/

```
|—— App.tsx
|—— package.json
|—— app.json
|—— tsconfig.json
|—— babel.config.js
|—— README.md
|—— README.pdf
|—— assets/
|   |—— images/
|       |—— app_icon.png
|       |—— icon_you.png
|       |—— icon_home.png
|       |—— icon_love.png
```

## Screenshots

The following screenshots show the directory grid and the message panel after different directories are selected.

You directory selected

School directory selected

Family directory selected

## GitHub and submission

Create a public GitHub repository,

<https://github.com/yueren257-282931/exercise-3-YueRen1269195.git>

I upload the complete project folder, then zip the same folder and upload it to D2L. Include all files, generated screenshots, image resources, and this README.pdf.
